

BEAUTIFUL SMILES

Still in Demand in Today's Economy!

More than ever before, dentists are challenged to create a beautiful smile utilizing various modalities of restorative dentistry. The smile evaluation is based on each individual's perceptions of his or her smile. The questions below are designed to help reveal how a person feels about how their smile affects their self image, interactions with others, and the quality of their relationships.

- > Do you love the appearance of your teeth and smile?
- > Have you ever found yourself looking at other people with beautiful smiles and wishing you had a similar smile?
- > Do you ever cover any aspect of your smile?
- > How does your smile make you feel? Confident?
- > When taking pictures, do you tend to smile with your lips closed instead of flashing a happy smile?
- > Are all of your teeth brilliant white or are they somewhat yellow, dark, or stained?
- > Do you have teeth that are crooked, uneven, or out of line?
- > Do you have a "gummy" smile -- showing too much gum tissue or having gums that are too thick?
- > Do you have any gray, black or silver (mercury) dental fillings in your teeth?
- > Do you have any old crowns that have dark edges at the top or that don't really look natural?

If you answered yes to ANY of the above questions, we can help give you a better, more beautiful smile.

Cosmetic dentistry, also called Aesthetic dentistry, can be described as any one or more dental treatments that improve the beauty of your smile.

Cosmetic dentistry can include a variety of techniques, from re-contouring the teeth or gums to placing veneers or crowns on a number of teeth.

Here are some of the more common cosmetic procedures we perform daily in our office.

veneers

Porcelain laminate veneers are literally a "shell covering" placed over

the teeth to enhance or correct their appearance be it to close spaces, increase size, change color or straighten the teeth.

CROWNS

Crowns are used to restore both anterior and posterior teeth that have been broken or are at high risk of doing so due to old, oversized fillings or fractures. By working with the finest laboratories in the country, we are pleased to produce crowns that look and feel

like your real teeth.

BRIDGES

Bridges are fixed or non-removable prostheses that are

constructed to replace one or more missing teeth. The teeth on either side of the existing space are used to anchor the bridge to restore functionality as well as aesthetics. We are now able to construct beautiful porcelain over metal as well as full porcelain zirconia bridges to produce the best results for each particular situation.

TOOTH-COLORED FILLINGS

We take pride in "restoring" teeth to as close to their original strength and with

dramatically improved appearance using composite resins and ceramics.

WHITENING

Bleaching teeth can be one of the most gratifying procedures we perform for patients in our office. Our patients are enjoying whiter and brighter smiles achieved in a very short amount of time.
